THE RATIONALE FOR PRIORITIZING THE IMPLEMENTATION OF FABRIC AND ARK PLANET TYPES

Abstraction:
This document briefly outlines the reasons for focusing specifically on the Fabric and Ark planet types.

I. REASONS FOR PRIORITIZING THE CREATION OF A FABRIC PLANET

Based on the following reasons, it's proposed to begin work on creating a Fabric-type planet:

–Increased Production Capacity
Additional territories, a complete focus on automated production, and high efficiency will qualitatively develop humanity's production capabilities.

–Solving Environmental Issues Related to Heavy Industry on Earth
Relocating all major heavy and ecologically hazardous industries to another planet

will significantly improve Earth's ecology (or that of another Ark Planet).

–Global Production Standardization
All processes are standardized, and components are easily interchangeable.

–Containment of Industrial Disasters
Any disasters would primarily occur on the planet itself, posing no global threat to humanity.

–Unprecedented Advancement of Science and Technology
A project of this scale requires technologies we currently do not possess, which will greatly accelerate scientific and technological progress.

–Economic, Political, and Social Impact of the Project
A project of this magnitude will inevitably influence society, fostering development in economic, diplomatic, and international relations.

II. ARK PLANET AS THE ULTIMATE GOAL

The Ark Planet is also an extremely important project. There are several reasons why we need to undertake this project as well:

–Addressing Demographic Issues
Additional territories will help solve demographic problems.

–Advancement of Science and Technology
Similar to the Fabric Planet, the creation of an Ark Planet can significantly advance modern science.

–A "Backup Plan"
In case of problems on Earth, a backup habitable planet would be a salvation for all of humanity.

However, despite its importance, this project should be pursued in parallel with the Fabric Planet.
The Fabric Planet is a means to create a material base for the Ark Planet and solve other issues to ensure greater suitability and quality of life on the Ark Planet.

III. Conclusion

The purpose of this document was to outline the reasons for prioritizing work on these specific planet types.
